Minimum requirements (for full points): „Subtask 2: 3D display”

Results:

- One or two outputs are enough to display, or open e.g. in Meshlab.
- You can add a screenshot or two to the documentation.
  It wouldn’t hurt..

Minimum requirements (for full points): „Subtask 3: Evaluation”

- „Compare” aspects:
  - (at least) 6 pairs of images – your „dataset”
  - 2 (or more) methods to compare – i.e., naive, DP, +etc.
  - 3 image metrics + Processing time – pro tip: display on different diagrams

  - Displaying your results: You _need_ to have plotted diagrams.
    Examples: points, lines, boxplot, etc. Whatever you think would be good.
    - Pro tip:
      - **You _can_ just average out metrics for the 6 pairs of images and plot them.**
      - In stead, you can also use boxplot or other formats to display more results at once.
        (E.g.: https://www.geeksforgeeks.org/how-to-create-boxplots-by-group-in-matplotlib)

Final Project Requirements

Vs

What Students Turn in

But here it’s fine as long as it agrees with the task’s text ...
